A NOVEL METHOD FOR DIGIT RECOGNITION

OBSERVING THE METRICS

```
In [13]: metrics = model.evaluate(x_test, y_test, verbose=0)
         print("Metrics (Test loss &Test Accuracy) : ")
         print(metrics)

         Metrics (Test loss &Test Accuracy) :
         [0.10136505961418152, 0.9807999730110168]
```
